# LETTER TO THE PATENTEE,

A

CONCERNING THE

# MEDICAL PROPERTIES

OF THE

# FLEECY HOSIERY.

#### BY WILLIAM BUCHAN, M.D.

AUTHOR OF DOMESTIC MEDICINE.

#### THE THIRD EDITION,

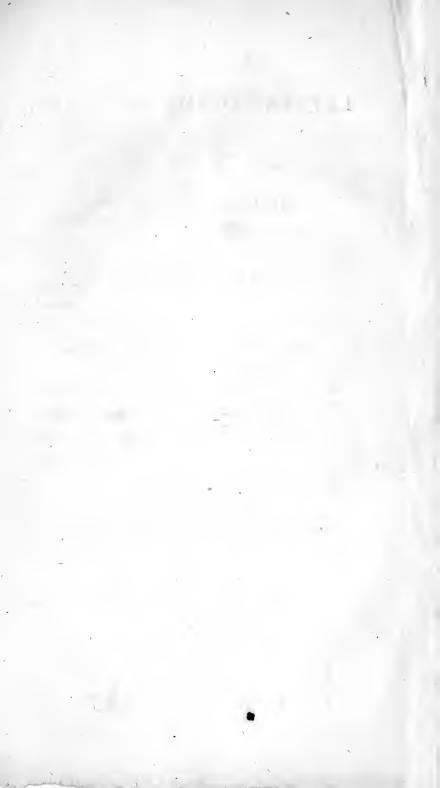

1h

WITH NOTES AND OBSERVATIONS BY THE EDITOR.

LONDON :

FROM PETERBOROUGH-HOUSE PRESS, By D. AND D. STUART, Peterborough-court, fleet-street: AND SOLD BY THE BOOKSELLERS. MDCCXC.

[Entered at Stationers Hall.]

# ADVERTISEMENT.

DR. BUCHAN, with his usual liberality, not only complied with the request of the Patentees, to allow his letter to be made public, but has improved this Edition by feveral new articles and observations, which have occurred fince its first publication, tending further to illustrate the medical uses of the FLEECY HOSIERY. The Patentees have also to acknowledge their obligations to many Friends, for letters containing accounts of the benefits they have received from this manufacture. From these letters the Editor has selected a few cures, which are inferted as notes in this Edition, together with some extracts from a Treatife on Tropical Difeases, written by the judicious DR. MOSELEY, whofe ideas, founded on extensive practice and observation, entirely coincide with those of DR. BUCHAN, concerning the benefits of woollen garments worn next the skin, which DR. MOSELEY found to be no lefs necessary in the hotteft than they are in the coldeft climates.

# MR. G. HOLLAND,

то

MANUFACTURER OF FLEECY HOSIERY

то

## THEIR MAJESTIES AND THE ROYAL FAMILY,

No. 99, HIGH-HOLBORN.

SIR,

I AM favoured with yours of January 30th, inclofing fome fpecimens of your FLEECY HOSIERY, and requefting my opinion concerning its medical properties, and the difeafes in which I think it is moft likely to prove beneficial to mankind.

As you affure me that the first hint of the medical utility of your manufacture was taken from my DOMESTIC MEDICINE, and that the favourable opinion which I expressed of the small fample you shewed to me fome time ago, had induced you to take out a Royal Patent for making it, I find myself called upon to support my opinion; and I comply with your request the more readily, as I am convinced that your discovery will prove of effential fervice to many of my fellow creatures, labouring under the most excruciating maladies.

Every

1 ... She

Every one who is at all converfant in these matters knows, that, in this country, the most fruitful fource of diseafe is obstructed perspiration. While the secretion from the skin goes duly and uniformly on, few diseases affect even the weak and delicate; but where this is obstructed the most robust cannot long enjoy health.

The celebrated Sanctorius fays, the infentible peripiration alone difcharges more than all the fentible evacuations together; and that the proportion of this to all the other evacuations, is as five to three : though this proportion varies in different ages, climates, and conftitutions, yet it is of fuch importance in all, that where it is in any confiderable degree deficient, a difeafed flate of the body will enfue.

Our infular fituation renders the atmosphere of this country liable to great and frequent changes, and as these changes are often very fudden, every one ought, as far as lies in his power, to guard against their influence, by adapting his clothing to the feason of the year, and the state of the weather. In doing this he only imitates Nature, who never fails to fortify those animals which are left to her care against the inclemency of the feasons, in those countries where they are produced. Thus we find the foxes, bears, and other animals, in cold climates, covered with a thick coat of fur, which keeps continually varying with the feasons, and gradually becoming longer and thicker, as the cold increases.

What Nature does for the brute creation, art enables man to do for himfelf, and he feldom errs in following her example. Care is no doubt neceffary in making making thefe changes; but even here Nature has not left us without a guide, fhe effects this purpofe by: flow gradations, and never ftarts from one extreme to another. Though man cannot copy her exactly in this refpect, yet it is in his power to avoid all great and fudden transitions. Those who heap on loads of clothes on the approach of winter, and are fo imprudent as to throw them off on the first appearance of fpring, have only themfelves to blame, if the confequences prove hurtful.

There is indeed a great fource of deception in our feafons; fometimes the winter fets in with all its rigour before it is expected; at other times it continues mild throughout, and there is occafion for very little additional clothing, even to the delicate. But the most irregular feafon, in this country, is fpring. We have often in March, or April, a few days fo warm as to make us believe that fummer is arrived, when all of a fudden it becomes more intenfely cold than in the middle of winter. Indeed December is fometimes mild throughout, while every day of June is cold and wet.

This irregularity of our feafons, renders it very difficult to lay down particular rules for regulating the clothing of invalids. It is their bufinefs, therefore, to watch the changes of the weather, and, as far as they conveniently can, to counteract their influence, by fuiting their clothing to the temperature of the air. The hardy and robust have indeed lefs to fear from the changes of weather; but there is no perfon fo ftrong as to be wholly fuperior to their influence, and

A 2

and the fool-hardy often lofe their lives by defpifing it.

The most proper clothing for counteracting the inclemency of our atmosphere, is certainly that which affords the greatest warmth with the least weight. There has not been hitherto, in the article of clothing, any thing invented, where these properties have been fo happily combined, as in your PATENT HOSTERY. I am informed that a fingle blanket can be made equal, in point of warmth, to fix of the common fort, while it does not exceed the weight of one \*.

This difference, in refpect of weight, is of great importance to the invalid. Hardly able to fupport his own weight, he can ftill lefs bear a load of clothing; and even to those who are able to bear a load of clothes they prove hurtful. They compress the veffels, and impede the free circulation of the fluids, on which not only health, but even life itself depends; besides they encumber the body, and render it lefs fit for active exertions.

\* The extreme lightness of FLEECY BLANKETS must recommend them to the Military; for the celerity in the movements of an army, upon which fo much depends, must always be in proportion to the weight of baggage they have to carry. The judicious Dr. Moseley in his Treatife on Tropical Difeases, the 2d edition, observes, "That the clothing our troops were furnished with the last war, in the West Indies, was too heavy for the climate;" and he represents it as absolutely necessary for officers and foldiers, on actual fervice in hot climates, to have clothing poffession, "warmth without incumbrance." EDITOR.

The

The manner in which your FLEECY HOSIERY is made, gives it a degree of elafticity not poffeffed by cloth of any kind: from which many advantages are derived. Thus it adapts itfelf more readily to the figure of the body, or of any part to which it is applied; and, by acting like a perpetual fpring, the friction is increased, by which means the difcharge from the fkin is promoted, and at the fame time carried off by the conducting power of the wool.

In point of cleanlinefs, its preference to fur must be obvious to every one. It is not only free from the unpleasant fmell which accompanies skins of all kinds; but it can, at any time, be washed with the greatest ease, and without any considerable expense, or diminution of its properties; besides, it is certainly less apt to harbour vermin, or communicate infection, than the skins of animals.

But the most decided fuperiority of the FLEECY HOSIERY, confifts in the powers which wool is found to posses, over all other articles of clothing, in abforbing and conducting moisture. This appears from the experiments read before the Royal Society by Sir Benjamin Thomson, which were made with a view to ascertain the powers of different fubstances, in abforbing moisture from the atmosphere.

These experiments were made with sheeps wool, beavers fur, eider down, cotton wool, linen, and filk; and the refult was, that wool possessed a greater power of absorbing moisture than any of the others, and was likewise better calculated for conducting or carrying off the superfluous moisture from the body. Sir Sir Benjamin's experiments are made with fuch accuracy, and the conclusions drawn from them tend fo fully to establish the fuperiority of your manufacture over every other species of clothing, that I shall take the liberty of inferting the ingenious author's inductions in his own words.

" I was totally miftaken," fays this candid writer, " in my conjectures relative to the refults of the experiments with the other fubftances. As linen is known to attract water with fo much avidity, and as, on the contrary, wool, hair, feathers, and other like animal fubstances, are made wet with fo much difficulty, I had little doubt but that linen would be found to attract moisture from the atmosphere with much greater force than any of thefe fubftances, and that, under fimilar circumstances, it would be found to contain far more water; and was much confirmed in this opinion, on recollecting the great difference in the apparent dampness of linen and woollen clothes, when they were both exposed to the fame atmosphere. But thefe experiments have convinced me, that all my fpeculations were founded on erroneous principles.

" It fhould feem those bodies which are the most eafily wetted, or which receive water, in its unelastic form, with the greatest eafe, are not those which in all cases attract the watery vapour dissolved in the air with the greatest force.

"Perhaps the apparent dampness of linen, to the touch, arises more from the ease with which that substance parts with the water it contains, than from the quantity quantity of the water it actually holds; in the fame manner as a body appears hot to the touch, in confequence of its parting freely with its heat, while another body, which is actually at the fame temperature, but which holds its heat with greater obftinacy, affects the fenfe of feeling much lefs violently.

"It is well known that woollen clothes, fuch as flannels, &c. worn next the fkin, greatly promote infenfible perfpiration. May not this arife principally from the ftrong attraction which fubfifts between wool and the watery vapour which is continually iffuing from the human body? That it does not depend entirely upon the warmth of that covering is clear; for the degree of warmth produced by wearing more clothing of a different kind, does not produce the fame effect.

"The perfpiration of the human body being abforbed by a covering of flannel, is immediately diftributed through the whole thicknefs of that fubftance, and by that means expofed to a very large furface to be carried off by the atmosphere; and the loss of this watery vapour which the flannel fustains, on the one fide, by evaporation, being immediately reftored from the other, in confequence of the ftrong attraction between the flannel and the vapour, the pores of the fkin are difencumbered, and they are continually furrounded by a dry, warm, and falubrious atmofphere.

" I am aftonished that the custom of wearing flannel next the skin, should not have prevailed more universally. I am consident that it would prevent a I multitude multitude of difeafes; and I know of no greater luxury than the comfortable fenfation which arifes from wearing it, efpecially after one is a little accuftomed to it.

"It is a miftaken notion that it is too warm a clothing for fummer. I have worn it in the hotteft climates, and in all feafons of the year, and never found the leaft inconveniency from it. It is the warm bath of a perfpiration, confined by a linen fhirt wet with fweat, which renders the fummer heats of fouthern climates fo infupportable; but flannel promotes perfpiration, and favours its evaporation; and it is well known that evaporation produces politive cold.

"I first began to wear flannel, not from any knowledge that I had of its properties, but merely on the recommendation of an able physician; and when I began my experiments, I little thought of difcovering the physical caufe of the good effects which I had experienced from it, nor had I the most distant idea of mentioning the circumstance. I shall be happy, however, if what I have faid or done upon the fubject, should induce others to make a trial of what I have fo long experienced with the greatest advantage, and which I am confident they will find to contribute greatly to health, and confequently to all the other comforts and enjoyments of life."

Had Sir Benjamin known how far your Manufacture exceeds flannel, both in agreeablenefs and ufe, he would have been ftill more lavifh in praife of it. Indeed it is hardly poffible to fay too much in favour of a medicament of fuch extensive powers, and which which is fo pleafant in the application. Many people, who cannot bear the harfh feel of flannel, find the FLEECY HOSIERY extremely agreeable; and indeed the fineft down cannot be more delicately foft than fine wool fpread on the furface of a texture fimilar to that of your manufacture. That it is infinitely more pleafant to the wearer, I can atteft from my own experience.

On a review of those difeases in which flannel is known to act, either as a preventive or remedy, they will be found more numerous than all that are cured by any one article of the Materia Medica; yet the powers of flannel, even in its most improved state, fall greatly fhort of those poffeffed by the FLEECY HOSIERY. It is not only of a fuperior fabric, but its warmth can be increafed to almost any degree, which cannot be done with flannel without rendering it too heavy for ufe.

Your invention is still in its infancy; but, from what has already been done, we may venture to foretell that it will become one of the most extensive branches of manufacture, as well as one of the most ufeful remedies; and that it will be of greater fervice to the afflicted than all the boaffed noftrums of the age, while it is entirely free from their dangerous qualities.

I fhall now proceed to point out fome of those difeafes in which your FLEECY HOSIERY will be found the beft application, not merely as a preventive but as a remedy; and here I must study brevity, as the fubject

ject is by far too extensive to be fully difcuffed in the compass of a letter.

The FLEECY HOSIERY will, in general, be found an excellent medicine, both for the prevention and cure of all difeafes arifing from obftructed perfpiration. Thefe in our climate include a great variety of diforders; as colds and coughs, catarrhal affections, confumptions, fevers, fluxes, aches and pains, piles, rheums, inflammations,  $\mathcal{C}c$ . To treat of all the difeafes arifing from this caufe would require a volume, I fhall therefore only touch on fuch as occur the moft frequently, and in which I think your manufacture the moft likely to prove ufeful.

## COLDS AND COUGHS.

The phyfician who faid that colds killed more than plagues, told a ferious truth. Had he taught us how to avoid them, he had been one of the greatest benefactors to the human race that ever appeared. Though your manufacture may not abfolutely effect this great purpole; yet the proper use of it will go a greater length, both in the prevention and cure of colds, than the application of any other medicine with which I am acquainted. Moft people place confidence in drugs when they have caught a cold, which only deftroy their appetite, while the complaint might with eafe and fafety be removed by a proper addition to their clothing; but it is in the nature of man to defpife things that are plain and obvious, and to hunt after secret medicines; he neglects what is in his own

own power, while he has implicit faith in the boafted noftrum, merely because he is ignorant of what it confifts.

## CATARRHAL AFFECTIONS.

Catarrhal Affections are of the nature of colds, and arife from the fame caufe, *viz*. an obftructed perfpiration. An increafed fecretion from the glands of the nofe, fauces, and throat, accompanied with fome degree of fever, mark this difeafe, which, in cold and moift ftates of the atmosphere, proves often fo common as to conftitute a true epidemic in this country. The only method of avoiding fuch complaints is to counteract the influence of the weather, as far as lies in our power. Your happy difcovery has enabled us to do this more effectually than any thing heretofore invented; without loading the body with clothes, it may now be kept fufficiently warm, and the perfpiration pretty uniformly fupported, even in the moft unfavourable ftates of the atmosphere.

#### CONSUMPTIONS.

Sudden transitions from heat to cold, change of apparel, or whatever greatly leffens the perfpiration, often prove the remote caufes of confumption. To avoid a malady, which proves fo fatal to the inhabitants of this ifland, we must endeavour to keep that difcharge as uniform as poffible, by adapting our clothing to the ftate of the atmosphere. Nor are the benefits of

B 2

the

the FLEECY clothing confined folely to the prevention of confumptions. In the incipient thifs, which is generally attended with a fhort, hicking cough, the prudent use of this warm clothing will be found perfectly confistent with the foundest medical practice: when the patient's strength is exhausted with colliquative strength is exhausted with colli-

## FEVERS.

That the fimple inflammatory fever is generally occafioned by an obftructed perfpiration, admits of no doubt. The effect of cold is to augment the tone of the fyftem, by which means the action of the heart and arteries is increafed, and what is called the inflammatory diathefis induced. Indeed every fymptom of this difeafe fhews a plethora, or too great fullnefs of the veffels, which is the well-known effect of an obftructed perfpiration. The way to prevent this fever, of courfe, is to keep up a regular perfpiration; and to reftore it when diminifhed, is the beft method of cure.

## INFLAMMATORY AFFECTIONS.

Local affections of the inflammatory kind, as Saint Anthony's fire, the acute rheumatifm, inflammation of the breaft, bowels, &c. are likewife the genuine offspring of obftructed perfpiration. In countries where the perfpiration goes on uniformly, thefe difeafes are hardly known; but every one knows their frequency, frequency, and multitudes feel their direful effects, in this country. They are ftill, however, more dreadful in colder climates, where, as we learn from Boyle's Hittory of Cold, the inhabitants often die of affections of the bowels, accompanied with the most excruciating torment. There can be no doubt but a proper application of your manufacture might be of great use in preventing these maladies.

## DIARRHŒA.

The diarrhœa, and other affections of the bowels, are often occalioned by obftructed peripiration; nor can any thing relieve these complaints more effectually than reftoring this necessary evacuation. I have often known an obftinate looseness cured by the utient's wearing flannel next his skin; but wherever can be done by flannel, more is furely to be expected from the use of your manufacture; and I would advise all perfors who have tender bowels, to keep up a due perfpiration, by wearing it of a proper thickness. This will be found more agreeable, and Ekewise more fase than the use of aftringent medicines.

#### DYSENTERY.

A modern medical author, in his Treatife on Tropical Difeafes, "confiders the dyfentery, or bloody flux, as a *fever of the Intestines*;" and adds, "that the caufe is *obstructed perspiration*, and that the cure confists in turning back the circulation to the furface of the body, body, and increasing the perfpiration by the most active *fudorifics*\*." Now it is evident that no kind of medicine can promote perfpiration, fo fpeedily and to that degree which a fhirt or drefs of FLEECY HOSIERY is capable of, when made of a fufficient thickness. By this the perfpiration may also be continued for any length of time, without that inconvenience to patients, which must unavoidably be occasioned by repeating internal medicines, and by hot rooms and a heavy load of bedding.

## HYPOCHONDRIACAL AFFECTIONS.

All people of delicate nerves have tender bowels, and though they fhould not wear it any where elfe, they would do well to keep the ftomach and bowels covered with a piece of your comfortable clothing, of a fufficient thicknefs. Even this partial ufe of it will, in many cafes, be of fingular fervice. Thofe who have weak lungs, will reap equal benefit from wearing a piece of it over the breaft.

## INFLAMMATION OF THE THROAT.

Those who are subject to the common angina, or inflammation of the throat, will find a piece of your FLEECY HOSIERY, worn about the neck, the best preventive, nor is it by any means an indifferent remedy. It is more efficacious, and much more agree-

\* Dr. Mofeley.

able,

able, than the common practice of applying a dirty flocking round the neck. When the difeafe does not yield to this, it will be neceffary to rub the throat with a liniment made of equal parts of oil and fpirits of hartfhorn, and to apply the holiery over it, of a confiderable thicknefs.

#### GOUT.

Amongst the foremost in the lift of those difeases, where the FLEECY HOSIERY is proper, flands the gout. Perfons fubject to this diforder ought to keep up the perfpiration at all times, efpecially in the extremities. This will be found one of the fafeft and beft preventives, and alfo the moft agreeable that can be employed. To keep the part eafy, foft, and uniformly warm, is almost all we can do, during a paroxyim or fit of the gout. For this purpole there is not any thing better calculated than the FLEECY HOSIERY. I have recommended wool in the gout, for above thirty years, and have never found caufe to change my opinion of it \*. Your manufacture, however, is in many refpects preferable to wool, as it poffeffes all its properties without the inconveniences attending the application of it.

The gout has in all ages been reckoned the RE-PROACH OF MEDICINE, and the wifeft among the faculty, have ever been the most cautious in their treatment of it. Notwithstanding the boasted nostrums of ignorant quacks and pretenders to medicine, we are not

\* See Domestic Medicine, under the Article Gout.

at

at this day in poffeffion of a remedy for this painful diforder. All that the phyfician can do is to recommend a proper regimen, during the intervals of the difeafe, and to give directions for the treatment of the patient while under the fit or paroxyfm. The former confifts chiefly in temperance and exercife, and the latter in keeping the parts affected eafy and uniformly warm, as recommended above. Patients who follow this plan may live many years, notwithftanding their having regular fits of the gout; while thofe who difturb the progrefs of this capricious malady, by medical applications, will be found to fport with their own lives, and will often have caufe to repent of their impatience and temerity \*.

#### RHEUMATISM.

The rheumatifm is not only a more common, but also a more obstinate diforder than the gout. That it admits of no remedy, fave *patience and flannel*, is an old adage. We can now, however, boast of a remedy far fuperior to the best flannel. The advantages of the FLEECY HOSIERY over flannel will appear on the flightest inspection; but on trial it is still more obvious. I have often recommended it in rheumatic affections, and have never been disappointed

\* The pain and fwelling occafioned by the Gout is fometimes relieved in a few hours, by the warmth and perfpiration brought on by wearing thick-fleeced Ankle Socks, &c. and Fleecy Gloves have reftored hands that had been fixed by the Gout, and rendered ufelefs for many years. EDITOR.

2

in

in my expectations from it. In the chronic rheu--matilm, indeed, it requires time; yet even here it will be found to perform a cure fooner than any other In this fpecies of rheumatism the patient is remedy. often put to much trouble and expence in attending the mineral waters, and warm baths, but many cannot afford to do fo; and we are inclined to think, that the neceffity of repairing to thefe fashionable places of refort might often be fuperfeded, by using the FLEECY clothing for a fufficient length of time. It has this advantage over warm water, that its operation is continual, whereas the other can only be applied for a very limited time.

## ACHES AND PAINS.

In every part of this ifland, where I have been, the old people univerfally complain of what they call pains in their limbs. This is evidently a fpecies of the rheumatifm, and is peculiarly incident to women who live on poor diet, are thinly clothed, and inhabit cold damp houfes. It does not appear to me, that any thing could be fo beneficial to thefe people as to have their limbs clothed in your comfortable woollen manufacture. This would certainly prove the beft prefervative against those pains, which not only render these poor people very miserable, but often a burden to fociety. They cannot indeed always purchase it themfelves, but the benevolent could not employ their charity better than in fupplying them with an article fo neceffary for health; and even those who have the care of the poor ought, on principles of economy.

c

nomy, to fupply them with this kind of clothing, to prevent their becoming totally unfit for labour, and confequently a greater burden to the public.

## PILES.

This painful diforder is often occafioned by cold. I have known it induced by fitting on the damp ground, throwing off a flannel petticoat, or wearing a thinner pair of breeches than ufual. Perfons fubject to the piles, ought carefully to avoid every thing that may excite a difeafe fo difagreeable in itfelf, and which often ends in obftinate fores or fiftulous ulcers. It does not appear to me, that any thing would prove more efficacious, in warding off this painful malady, than the proper application of the FLEECY clothing, particularly towards the feat of the diforder ; nor will it be found lefs ufeful as a remedy, when the difeafe has actually taken place.

#### DROPSY.

There is no difeafe the cure of which depends more on promoting perfpiration than the dropfy. In all patients labouring under this malady the fecretion from the fkin is defective, and ought by all means to be promoted. This cannot be done fo effectually, as by wearing your manufacture of a fufficient thicknefs. I am credibly informed, that the dropfy has been cured by the patient's wearing your FLEECY HOSIERY, after the most powerful medicines, accompanied with the use of flannel, had proved totally ineffectual. *ASTHMA*.

## ASTHMA.

People afflicted with the afthma are always in danger, and often lofe their lives from a fudden check of perfpiration. They ought carefully to watch the changes of the weather, and to fortify themfelves against them by adapting their clothing to the temperature of the atmosphere. I would advise afthmatic patients to beware of the cold, raw, easterly winds, which prevail in our fpring, and towards the fettingin of winter, and to avail themfelves of your happy difcovery for counteracting their influence.

### APOPLEXY.

The apoplexy is now fo frequent as to become truly alarming. It feldom, however, attacks people till the decline of life, when the perfpiration becomes defective, and the fkin grows dry and rigid. When the difcharge from the fkin is obftructed to fuch a degree, that the fuperfluous moifture of the body cannot be carried off by the other emunctories, or common outlets, a *pletbora*, or too great fullnefs of the veffels, muft enfue. This will induce a predifpofition to apoplexy. To ward off the dreadful blow as long as poffible, the perfpiration muft be kept up; and I know not any thing more proper for this purpofe than your FLEECY HOSIERY, prudently applied, and accompanied with a fufficient degree of bodily exercife.

PALSY.

# PALSY.

The apoplexy and palfy make their attack about the fame time of life, and often accompany each other, which renders it probable that, in fome meafure, they depend on the fame caufe. That your manufacture is calculated to prevent the palfy, I will not take upon me to fay; but I am certain that, in many cafes, it will be found a very proper remedy \*. The torpor of a paralytic limb renders fome warm and ftimulating application neceffary, and this intention is more likely to be anfwered by your hofiery than flannel, as it not only poffeffes a greater degree of warmth, but is, from its texture, better adapted to act as a ftimulus to the fkin.

## DEAFNESS.

Few things prove more troublefome to perfons in the decline of life than deafnefs. This is generally occafioned by cold in the head. I have often known deafnefs cured by a warm night-cap; and would recommend it to all who are afflicted with this malady, to wear caps of your manufacture. These caps will not only remove deafness, but will be found likewife

\* A paralytic firoke left a lamenels and perpetual pain in the knee of a gentleman advanced in years, for which he confulted the moft eminent of the Faculty, but obtained no relief, for three years; at laft he had recourse to FLEECY HOSIERY, which wholly removed the pain in a few days, and gradually reftored the firength of the knee. EDITOR.

to

to obviate many other complaints, as the tooth-ach, head-ach, pains of the face, &cc. In all cafes where the head is wet, either by bathing or violent exercife, thefe caps will be found of the greateft fervice. This I am told has been frequently experienced by fportsmen, who, by using them when heated in the chace, have never caught cold. There are no people fo carelefs as the inhabitants of this country, with regard to the covering of their heads during the night; and this neglect is the fource of many diforders, befides thofe mentioned above \*.

#### SKIN DISEASES.

Cleanlinefs and warm clothing are the great preventives of fkin difeafes. Where the fkin is not fufficiently defended againft the inclemency of the weather, it becomes rigid, and confequently unfit for tranfmitting the perfpirable matter through its pores. The internal diforders, arifing from this caufe, have already been taken notice of. The external are, fcaband fcaly eruptions, foul blotches, defedation of the fkin, chilblains, and fuch like. Thefe are always found to prevail most among the poor, who go drty and are ill clothed. The chilblains, indeed, affect young people of all ranks, yet this complaint might generally be prevented by keeping the feet and legs dry, and fufficiently warm. For this purpofe I know

\* A deafnefs, of feveral years continuance, that had withflood every medical application, was totally removed in a fortnight by wearing a FLEECY night-cap. EDITOR.

of

of no application equal to your foot-focks and fleecy hofe \*.

## AGUE.

In countries where agues prevail, and the pallid inhabitants are fhook, like the afpine leaf, for at leaft one half the year, there is reafon to believe, that a fpecies of clothing fo perfectly adapted to defend the body against the moifture of the atmosphere, and keep up an uniform degree of warmth, would be found fuperior, both in fafety and efficacy, to any internal medicine whatever. Indeed the internal medicines made use for this purpose, are generally of fuch a nature that, if they keep off one difease, they induce others, which prove equally, if not more fatal.

## FLEECY HOSIERY, IN-VARIOUS SITUATIONS, THE BEST PRESERVATIVE OF HEALTH.

How pernicious that kind of clothing muft be which retains the moifture, and keeps it in continual contact with the body, to men who work in damp fituations, will appear from Sir Benjamin Thomfon's experiments; and the advantage of the FLEECY HOSIERY, in conducting it off, will be no lefs obvious. Spalden, the celebrated diver, told me that he could not live under water in any drefs but flannel. In other clothing

\* Several perfons, who had tried various medicines for the Scurvy, without relief, had recourfe to Shirts and Drawers of FLEECY HOSIERY; and, after wearing them a flort time, the Diforder came off in fcales, and left their fkins perfectly clear. EDIT.

he

he was chilled with cold, but, with a fufficient quantity of flannel, he found himfelf pretty comfortable\*. Had he known the fuperior advantages of your manufacture, he would no doubt have been ftill more fo.

To travellers, in cold countries, your manufacture muft be of the greateft ufe, particularly the FLEECY gloves, pantaloons, foot-bafkets, and great coats. The extremities always fuffer moft from cold, and are in the greateft danger of mortification. I fhall not be furprifed if your manufacture become the common clothing of the northern nations. Where the inhabitants are obliged to have recourfe to furs in winter, the FLEECY clothing will, I am convinced, be found to anfwer their purpofe much better, and will likewife prove far more agreeable to the wearer.

It will not, however, fo readily occur, that the FLEECY HOSIERY is the moft proper clothing forthe inhabitants of the hot climates; yet this is acknowledged to be the cafe by all who have made the trial. It can certainly be made more light than any other kind of clothing, and with fo thin a fprinkling of wool as to act more as a cooler than a heater of the body, while it conducts off the moifture from the fkin much fafter than any other kind of clothing.

\* Dr. MOSELEY relates, that "Dr. IRVING, with a fmall party of men, lay in the woods, on the Mufquito fhore, for fourteen days and nights, during the rainy feafon of 1780, without taking off his clothes, while he was exploring a paffage to the Spanish fettlements up Blue-Fields River. He efcaped without the least injury to his health, having blankets with him, and being clothed in a fhirt, fhort jacket, breeches, and stockings, all made of flannel. The others, not using the fame clothing, fuffered feverely, without exposing themselves to the same fatigue and danger."

There

J.

There is no fet of men to whom the FLEECY HOSTERY is more likely to prove beneficial, than thofe who have lived in hot climates; they univerfally complain, that, even with the warmeft flannel and thickeft clothing, they are not able to fupport the inclemency of our winters. Thofe, however, to whom I have had an opportunity of recommending your manufacture, have all told me, that, by wearing it next their fkin, they have found themfelves fufficiently warm and comfortable, even in the coldeft feafon.

All perfons who fit to read, write, or work, efpecially in cold rooms, fuch as many of the public offices are, ought to have their feet and legs clothed in your FLEECY HOSTERY. For the circulation in the limbs is obftructed by much fitting, and a chilly torpor brought on the feet and legs, which paves the way to edematous fwellings, paralytic affections, and the like. Moft women may be ranked among the fedentary, and many of them are afflicted with various maladies arifing from this caufe. It is impoffible to fay too much in favour of your manafacture, worn as under garments by the ladies, in a climate fo variable as ours, where more than half the difeafes which afflict the fex will be found to arife from cold.

In cafes of fufpended animation, as it is called, where a perfon is to all appearance dead, and where the great object is to recall the latent principle of life, by reftoring the genial warmth, and exciting the actions of the fyftem, it will be readily allowed that few things

things are likely to have a more happy effect than wrapping the body in fome of the thickeft of your FLEECY HOSIERY, made as hot as poffible. This will not only receive a much greater degree of heat than a common blanket, but, retaining the heat longer, will be found a much more fuitable application than the other, while it is fooner and more eafily prepared than a warm bath.

I can imagine many fituations where your manufacture would be of fingular fervice, both to failors and foldiers. The former are often obliged to keep on their wet clothes for feveral days together, and the latter to continue in camp during cold and wet feafons, or in a low damp country. I have been told by feveral of the officers who lay in camp on Newcaftle Moor, in winter 1745, that half the army muft have perished by cold, had it not been for the flannel waiftcoats given to the foldiers by thefe good people called Quakers. No one who has feen it needs to be told, that your manufacture would prove more beneficial than flannel to men in fuch fituations.

That warm clothing would greatly contribute towards the prefervation of the military, in hot as well in cold climates, is evident from Dr. MOSELEY's Treatife on Tropical Difeafes. In almost every page of this ufeful work, the Doctor fhews the neceffity of flannel, or fome other warm clothing, for preferving the health of men exposed to the exceffive rains and chilly dews of tropical climates. Of the good effects of this he gives many inftances. Nor were its benefits confined to the prefervation of health:

health: in the cure of all complaints arifing from obftructed perfpiration, which even between the tropics are very numerous, the moft fuccefsful practice was to reftore that neceffary evacuation as foon as poffible. How well the fleecy clothing is calculated to effect this important purpole muft be obvious to all.

In point of economy, few things will be found to equal your invention. It will not only fuperfede the ufe of furs, but, in many cafes, even of fuel; which, to the inhabitants of cold countries, proves very expenfive. Nor does the evil end here. Perfons who fit roafting 'themfelves near a great fire injure their They breathe a burnt, unwholefome air, health. and, after all, are but half warmed. A perfon clothed in a fufficient thicknefs of your manufacture will hardly find occasion for fire in any fituation; and he will feel himfelf much more comfortable than by the fire-fide, where he is burnt on the one fide, and frozen on the other. In one word, your invention may truly be faid to unite economy, pleafure, and ulefulnefs: which is more than most of our modern difcoveries can boaft.

I fhall conclude this letter, already too long, by recommending to you the most active perfeverance in the profecution of your plan. You have not only made a great improvement in the woollen manufacture, but also in medicine. Your FLEECY HOSIERY, judiciously applied, will not only in many cafes preferve health, but prove more beneficial to the afflicted than any thing that has been difcovered in the medical art art for thefe many years: like other ufeful difcoveries, however, it will meet with oppofition; but patience and perfeverance will overcome it all, and you will find, befide the brave defender of Gibraltar\*, many who will ftep forward to do juftice to your ufeful invention.

Wifhing you all that fuccefs to which your merit is fo juftly entitled,

### I am, SIR,

### Your most obedient servant,

March 10, 1790.

### W. BUCHAN.

\* The Right Honourable Lord HEATHFIELD wrote a letter to the Patentee, fetting forth the benefits he had received from the FLEECY HOSIERY, and promifing to recommend it to his friends, both at home and abroad.

POST-

# POSTSCRIPT.

IF the fentiments contained in this Letter wanted the fanction of authority, it would be eafy to adduce a number of eminent authors, both ancient and modern, who have entertained the fame ideas. The celebrated Boerhaave ufed to fay, that nobody fuffered from cold, except beggars and fools: the former not being ableto purchafe clothes, and the latter not having fenfe to ufe them. This certainly fhews, that, in the learned Doctor's opinion, the effects of cold might be obviated by a proper attention to clothing.

It is faid of the celebrated Mr. Boyle, whofe delicacy of conftitution rendered it neceffary for him to adapt the warmth of his clothing to the ftate of the weather, that he had a vefture fuited to every feafon of the year; and it is much in favour of his plan, that, although a valetudinarian, he died at an advanced age.

But the author whofe fentiments are most in point is the learned Sanctorius, Professor of Physic at Padua, who first established the doctrine of infensible perspiration, on undeniable grounds, and shewed its importance in the animal economy, and its influence on health. Though the doctor lived in a more temperate climate than ours, yet the following aphorisms, which are felected from a great number, will shew how much he thought health depended on the infensible perspiration being duly and regularly kept up.

#### APH. XL. SECT. I.

"Whenfoever nature is diffurbed in the bufinefs of perfpiration, fhe foon begins to be defective in many more of the animal functions.

#### APH. LXVII.

"The external caufes which are wont to hinder perfpiration are, the cold air, and that which is damp and foggy; fwimming in cold water, &c.

### APH. LXXXVI.

"Old age may truly be reckoned a diftemper, but it may be long protracted if the body perfpires well.

### APH. LXXXVIII.

"The humours of gouty people, even the most thick, are carried off only by perfpiration.

#### APH. XCII."

"A loofenefs may be removed by increasing the quantity which is to be perfpired, as often happens in warm bathing.

#### APH. CII.

"Hypochondriacal perfons are cured by promoting perfpiration.

#### APH. CXV.

"In autumn the weight of the body increases, owing to the diminished perspiration, which, if it be beyond a healthful standard, will produce tertians and putrid fevers.

#### APH. XIV. SECT. II.

"Swimming in cold water, after violent exercife, is very delightful, but fatal; for nothing is more deftructive than extremes.

APH.

### APH. XXI.

"A cool wind always hinders perfpiration, and is hurtful.

" Any draught of air has the fame effect.

#### APH. XLVI.

"There is no danger of the autumnal diftempers, if the body be well guarded against the increasing cold by warm garments.

#### APH. XLVII.

"To be well covered with clothes, affifts perfpiration, and lightens the body.

#### APH. L.

"They who, in fpring, throw off their winter garments too haftily, and are too backward in putting them on again in the fall, in the fummer are fubject to fevers, and in the winter to defluxions."

# A LIST

# LIST OF ARTICLES

#### MANUFACTURED BY

# HOLLAND, WAISTELL, AND HORTON,

#### PATENTEES OF THE FLEECY HOSIERY,

No. 99, HIGH-HOLBORN.

ARTICLES for perfons in bealth, and for the prevention of diforders, are fleeced to the thicknefs of No. 1. for Jummer wear, and to the thicknefs of No. 2. for winter. Thefe Numbers have a reference to a scale of thicknefs graduated from No. 1. to No. 6.—No. 1. is lined with a thin sprinkling of the finest wool, and No. 6. is an inch thick.

# Silk Articles fleeced of the thickness of No. 1. and No. 2.

### FOR PERSONS IN HEALTH, AND FOR THE PREVENTION OF DISORDERS.

Hofe fleeced all through. Ditto fleeced in the feet only. Ditto fleeced in the feet and ankles. Silk gauze hofe fleeced to be worn under filk hofe. Silk hofe interlined, and interlinings for filk hofe. Socks and ankle focks.

Knee

# ( 32 )

Knee caps.

Shirts, with or without fleeves.

Drawers.

Petticoats.

Pieces for under-waiftcoats, drawers, and petticoats. Pieces for waiftcoats and breeches.

Night caps for ladies and gentlemen.

Gloves, mitts, muffatees, and muff-linings.

Gloves fleeced with Vigonia wool.

# Cotton Articles fleeced of the thickness of No. 1. and No. 2.

Every Article enumerated above is fleeced on Cotton alfo, both white and in colours, and of every quality, from the floutest to the finest.

# Cotton Articles fleeced of the thickness of No. 3. and upwards.

Pieces from half a yard to three quarters wide.

Robes, pelefes, morning gowns, wrapping gowns, and great coats, for ladies and gentlemen, both white and in colours.

Blankets from 16s. each and upwards, according to their finenefs, fize, and thicknefs.

Cradle blankets.

Bootikins, foaled and calafhed, for complaints and to travel in.

Long

# ( 33 )

Long boot-hofe, foaled and calashed, for complaints and to travel in.

Pantaloons, ditto, ditto.

Stirrup stockings.

Travelling caps.

Feet baskets for coaches, cold rooms, and churches. Coach carpeting.

Houfings for faddles.

Imitations of lion's fkins, leopard's fkins, and various kinds of fur.

Waiftcoat fronts furred with cotton, that has the appearance and foftnefs of filk.

FOR THE RHEUMATISM AND OTHER COMPLAINTS,

Hofe and underhofe.

Socks and ankle focks for fleeping in.

Knee caps.

Shirts.

Drawers.

Petticoats.

Breaft plates, or bofom friends.

Collars for fore throats.

Gloves, mittens, muffatees and muff-linings.

# Worsted Articles fleeced of the thickness of No. 6.

FOR THE GOUT.

Large hofe very elaftic. Ankle focks ditto. Knee caps ditto.

Gloves

Gloves and mittens ditto. Shirts.

Drawers.

Petticoats.

Breaft plates, or bosom friends.

Night caps.

Shoes and bootikins.

Pieces from half a yard to three quarters wide.

FINIS.
